

COVID-19 Plan for Your Pets

It is important to consider what you will do with your pet if you contract COVID-19 and need to be hospitalized. Consider speaking with family or a friend about caring for your pet in your absence.

- Prepare directions for pet care in advance as a precaution, including instructions on the administration of medications.
- Make sure you have adequate supplies for the care of your pet in your absence, including medicine.

- Make sure your pet has the correct identification, including a collar with pet tag and an updated microchip.
- Ensure your pet's caretaker has your veterinarian's information in case of emergency.
